1764

DATE MAILED: 09/08/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/607,043

Applicant(s)

SUGHRUE ET AL.

Examiner

Walter D. Griffin

Art Unit

1764

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 July 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-6, 8-17, 19-21 and 24-65 is/are pending in the application.
- 4a) Of the above claim(s) 50-65 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-6, 8-17, 19-21 and 24-49 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____

- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Group I, claims 1-49 in the reply filed on July 22, 2005 is acknowledged. The traversal is on the ground(s) that the Groups are so closely related to each other in this application to be allowable in a single application. This is not found persuasive because applicant has not shown that the alternate use proposed for the product is not feasible.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 21 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 21 is indefinite because the expression "said substitutional solid solution" lacks proper antecedent basis in claim 1. It appears as if claim 21 should depend on claim 20.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are

Art Unit: 1764

such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-6, 8-12, 14-17, 19-21, and 24-49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Russ et al. (US 5,366,614) in view of Sughrue et al. (US 6,254,766 B1).

The Russ reference discloses a process for desulfurizing a hydrocarbon such as cracked gasoline. The process comprises contacting a hydrocarbon feedstock in a reforming zone with a particulate system comprising a physical mixture of a reforming catalyst and a sulfur sorbent. The mass ratio of catalyst to sorbent can range from 1:10 to 10:1. This combination of catalyst and sorbent would necessarily desulfurize the hydrocarbon while improving the octane of the hydrocarbon. Since reforming includes isomerization and cracking reactions, the catalyst would necessarily be effective, to some extent, for isomerization and cracking. The reforming catalyst comprises a platinum group metal and a support such as a zeolite. Specific zeolites include those identified as FAU and MFI. The zeolite type identified as MFI includes ZSM-5 zeolites. These

Art Unit: 1764

zeolites may be in the hydrogen form and necessarily comprise rings of T atoms and have channel dimensionality as claimed. Operating conditions include temperatures from 260° to 560°C (500° to 1040°F). The catalyst/sorbent mixture can be regenerated and reactivated while other reactors remain on-stream. This regeneration would necessarily remove sulfur and coke from the particles. See column 1, lines 39-55; column 3, lines 27-34 and 52-68; column 5, lines 1, 2, and 66-68; column 6, lines 1-68; column 7, lines 1-15 and 43-64; column 9, lines 25-68; column 10, lines 1, 2, and 61-68; and column 11, lines 1-10.

The Russ reference does not disclose the oxidation and reducing steps to regenerate and reactivate the particulate system, does not disclose a zinc oxide and promoter metal sorbent, does not disclose the amount of or silica-alumina ratio of the zeolite in the catalyst, does not disclose the mean particle size range, and does not disclose that the particles have a Group A Geldart characterization.

The Sughrue reference discloses a desulfurization sorbent that comprises zinc oxide (10-90 wt%), alumina, silica, and nickel (5-50 wt%). Since alumina is present in the sorbent, an aluminate would necessarily be present. A substitutional solid solution as claimed would also be formed. The sorbent is regenerated by oxidation followed by reduction as claimed. The oxidation is performed at temperatures ranging from 800° to 1200°F and the reduction is performed at temperatures ranging from 100° to 1500°F. The sorbent has particle sizes in the range of 20 to 500 microns. See column 2, lines 59-65; column 4, lines 8 through column 6, line 26; and column 8, line 46 through column 9, line 36.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the process of Russ by utilizing the sorbent of Sughrue in

Art Unit: 1764

place of the sorbent disclosed by Russ because the sorbent is effective at desulfurizing the feed streams of Russ with minimal effect on the octane of the feed stream. One would necessarily use the regeneration and reactivation procedure that is effective for the sorbent of Sughrue.

It also would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the process of Russ by utilizing any amount of zeolite and utilizing a zeolite having the claimed silica:alumina ratio because one would adjust the amounts in order to maximize the production of the desired product and because any zeolite that falls within the classes of zeolites disclosed would be expected to be effective in the process regardless of the silica:alumina ratio of the zeolite.

It also would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the process of Russ by utilizing particles with the claimed size and Group A Geldart characterization because as long as there is effective contact, one would utilize any type of particles in relation to size and Group A Geldart characterization.

Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Russ et al. (US 5,366,614) in view of Sughrue et al. (US 6,254,766 B1) as applied to claim 7 above, and further in view of Dodwell (US 6,429,170).

The previously discussed references do not disclose the use of perlite in the sorbent.

The Dodwell reference discloses a sorbent that comprises zinc oxide, silica, alumina, and a promoter metal. The silica is in the form of perlite. See column 3, lines 6-24.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the teachings of the previously discussed references by

Art Unit: 1764

including perlite in the sorbent of Sughrue as the silica source as suggested by Dodwell because the sorbent life and attrition value of the sorbent can then be controlled.

Response to Arguments

The argument that the modification of the Russ process by Sughrue is improper because the process of Russ utilizes a feed with less than 10 ppm sulfur whereas the Sughrue reference discloses the removal of larger quantities of sulfur is not persuasive. The fact that the sorbent of Sughrue is effective in feeds containing at least 100 ppm of sulfur does not mean nor would it suggest that it is not effective in feeds containing less than 100 ppm of sulfur. A sulfur sorbent would be expected to remove to least some sulfur from a feed regardless of the initial amount of sulfur in the feed.

The argument that it is unclear how the substitution of the sorbent of Sughrue would affect the process of Russ is not persuasive. Since the sorbents of both Russ and Sughrue are effective for removing sulfur from a hydrocarbon, the examiner asserts that there is a reasonable expectation of success for the process of Russ when one substitutes the sorbent of Sughrue for the sorbent of Russ.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1764

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Walter D. Griffin whose telephone number is (571) 272-1447. The examiner can normally be reached on Monday-Friday 6:30 to 4:00 with alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on (571) 272-1444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
